The Radio Club was established in the fall term of 1946. The first reference to the club is in the Case Tech of 22 November, 1946..."Having been organized this semester the Radio Club is composed of Ham operators and men interested in amateur radio broadcasting... the club has secured the permission of Professor Chuschill to set up a station in the Case Club... Going over the ether waves soon will be signals from Case's first radio station which will be built by members of the newly formed Radio Club."

The Club isn't mentioned in the Differential until 1948..."Throughout the year the Friday night meetings of the members were spent in their private 'shack' ~~in~~ at the Case Club. A 250-watt Temco unit and a 75-watt code transmitter remained in action. Neophyte operators were given code practice at regular sessions...and a FCC license for each member was the goal of the year." The 1951 Differential contains the following information..."As part of the civilian defense program, the Radio Club has become one of the many links in the vital networks of ham stations that form part of the Ohio Emergency Control."

In the 1966 Differential we find that the Case Amateur Radio Club (CARC) was licensed under the call W8EDU and moved its headquarters to the fourth floor of Old Main. The room housed two separate stations, code practice equipment, and an extensive library of amateur publications dating to 1925. An antenna was installed on the roof of Old Main. From the information available, ~~the~~ it seems that the Radio Club was inactive from 1955 to 1963.
